GÜRSOY®
1933

The vision of the Gürsoy family is to become a highly sought company domestically and internationally in the production of reliable and high quality hazelnut products, with emphasis on the customer experience in our globalized world.

We aim to offer a product portfolio of both delicious and nutritious foods and encourage consumers to purchase products produced from reliable raw materials under sustainable conditions that enable them to pursue a healthy lifestyle.

As Chairman, I have a strong belief that our rapidly developing country and community offers significant growth opportunities for our partner companies as we enshrine a dynamic and ethical value system in all that we do at Gürsoy.

Taking strength from this belief, I envisage that our company will achieve its vision by 2023, the 100th anniversary of the Republic of Turkey.

On this occasion, I would like to present my gratitude to all our employees and business partners who have been with us on this remarkable journey.

Dursun Oğuz Gürsoy
Chairman, Gürsoy Tarımsal Ürünler Gıda San. ve Tic. A.Ş.

About Us

Based in the heart of the hazelnut industry in Ordu on Turkey’s Black Sea coast, Gürsoy has been globally supplying high quality natural and processed hazelnuts since 1933.

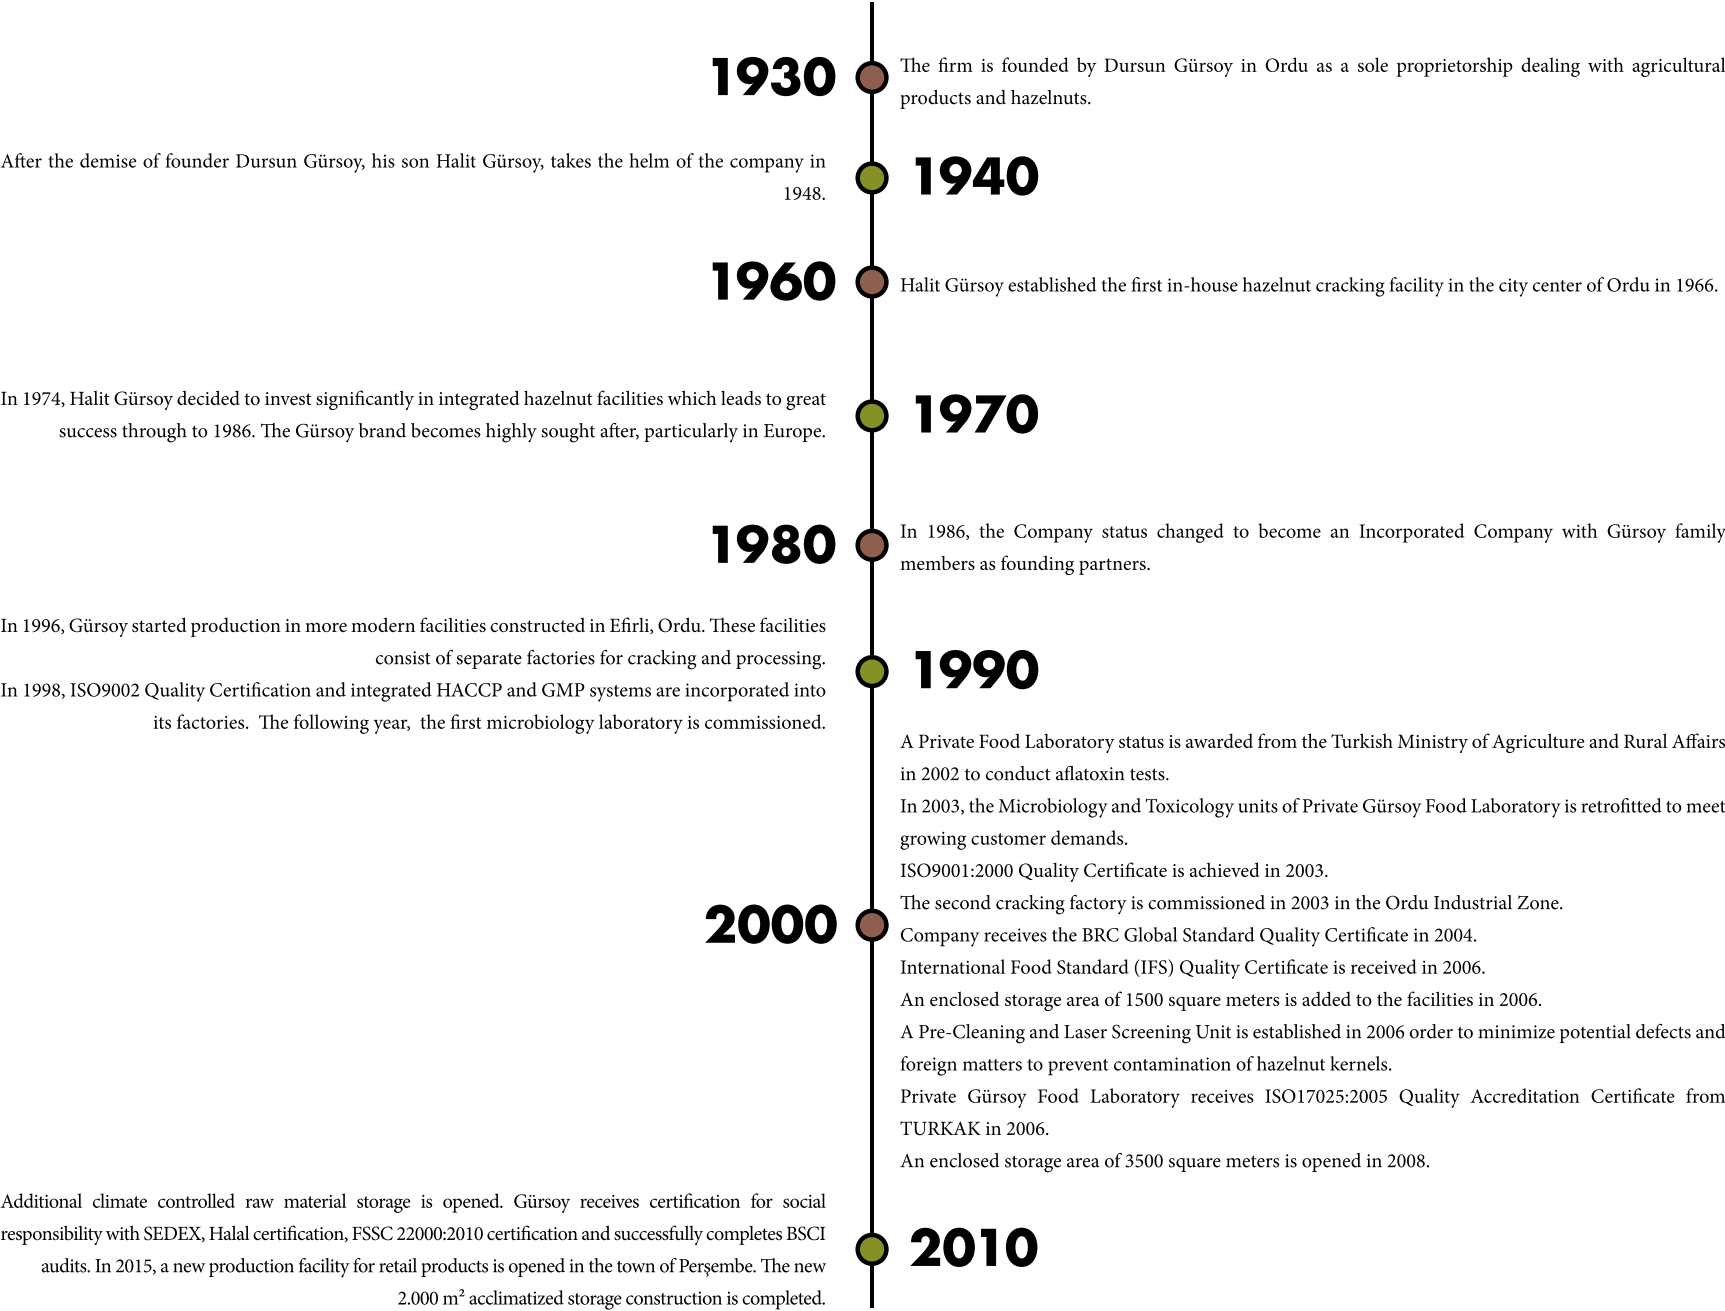

Stemming from our experience and specialization in the field and using the latest technology, we have become the most innovative company in the industry.

As a company closely keeping abreast with the developments in the global commerce and incorporating best practices in our production systems, Gürsoy has a production and sales policy which is responsive to customer demands and focused on customer experience.

Being a supplier to major food brands and distributors both domestically and internationally, we work with leading companies in the chocolate, cake, confectionery, ice-cream and biscuit industries to bring outstanding products to market.

HISTORY

Facilities

Hazelnut Cracking Facilities

Gürsoy has two separate hazelnut cracking facilities, one in Kumbasi, located 6.5km from the city center of Ordu and another at the Ordu Industrial Zone. These facilities have a capacity to produce 75 tons of hazelnut kernels from 150 tons of in-shell hazelnuts in a single shift and are equipped with modern electronic sieving machines.

E-Selection and Cleaning Facility

Gürsoy produces natural hazelnut kernels that are to the high-quality standards expected from our customers. The facilities are equipped with air separators, destoners, laser sorters, sieves, metal detectors and magnets to achieve this quality.

Integrated Hazelnut Facility

The Integrated Hazelnut Facility is located in Kumbaşı and equipped with modern machines and selection technology equipment to meet GMP and HACCP principles and standards. Our modern technology and production systems are designed to follow the FSSC 22000 quality management system and enable production of blanched, roasted, diced, sliced hazelnuts, hazelnut meal, hazelnut paste and hazelnut praline products.

The facility has a roasting capacity of 5 tons per hour and produces hazelnuts in different forms with modern roasting machines, laser selectors, X-ray machines, sortex selectors, sieves, metal detectors and magnets.

Gürsoy prioritizes quality in all its production facilities. Therefore, hygiene, working conditions and equipment pools are designed and constructed in accordance with legislation, GMP and HACCP rules.

Retail Products Production Facility

In the facility located in town of Perşembe, the products aimed at end-consumer are produced. The facility where hazelnut spreads, hazelnut dragees and packed hazelnut varieties are produced, produces under HACCP and GMP principles just as in all other facilities.

Quality Assurance & Control

Gürsoy's success is based on the principle of quality in production.

Our experienced quality control team successfully performs many tests from raw material to finished product at Gürsoy Food Laboratory, which is one of the most advanced laboratories in the sector.

Quality Assurance & Control

Our engineers and technical personnel who perform physical, chemical and microbiology analysis on hazelnuts and their products ensure the continuity of the quality system in the best way.

Our laboratory is a pioneer in the private sector that continuously improves its service quality and provides services at international standards. For this purpose, it participates in aflatoxin and microbiology tests and international proficiency tests every year.

Environmental Sustainability

We continuously review all our business segments to reduce our carbon footprint and conserve the environment for the benefit of future generations.

In recent years, we have completely re-designed our products, packaging, production units and transportation activities to minimize our environmental impact.

Cultural and Social Activities

We contribute to local projects in regions from which we source our raw materials and improve the living standards of our growers while creating additional employment opportunities for their families.

Sustainable Agricultural Activities

We encourage environmental and biological diversity, eco-sustainable agricultural practices and minimize chemical usage.

Since 2009, with our sustainable agriculture program, we have directly supported our primary producers with soil analysis, training programs and orchard improvement schemes.

We provide training and support to primary producers in pruning, fertilization, pesticide application, harvesting and drying methods, soil care, avoiding child labor and similar projects.

Our investments to ensure traceability from the farm to the final product are rigorous.

Societal Sustainability

We aim to offer our nation and the world with a product portfolio consisting of both delicious and nutritious foods and encourage consumers to purchase products produced from reliable raw materials under better conditions that enable them to pursue a healthy lifestyle.
